0,75l	Rulandské modré - suché, pozdní sběr		259,00

the 1990s, the number of people in the world who are malnourished has increased from 600 million to 800 million (FAO 2000). The number of people who are obese has increased from 100 million in 1975 to 300 million in 2000 (WHO 2000). The prevalence of obesity has increased in all countries, but the increase has been most dramatic in the industrialized nations (WHO 2000). The prevalence of obesity in the United States has increased from 15% in 1976 to 30% in 2000 (Flegal *et al.* 2002). The prevalence of obesity in the United Kingdom has increased from 10% in 1980 to 25% in 2000 (Health Survey for England 2001).

Obesity is a complex condition that is caused by a combination of genetic, environmental, and behavioral factors. The genetic factors that contribute to obesity are still being investigated, but it is clear that there is a strong genetic component to the condition. Environmental factors, such as diet and physical activity, also play a major role in the development of obesity. Behavioral factors, such as eating habits and lifestyle, are also important. The combination of these factors can lead to the development of obesity, which is a major risk factor for a number of chronic diseases, including heart disease, diabetes, and certain types of cancer.

The prevalence of obesity has increased in all countries, but the increase has been most dramatic in the industrialized nations. This is due to a number of factors, including changes in diet and physical activity. In the industrialized nations, there has been a shift from a diet of whole grains, fruits, and vegetables to a diet of refined grains, sugary drinks, and fast food. There has also been a decrease in physical activity, as people spend more time sitting at work and at home.

Obesity is a complex condition that is caused by a combination of genetic, environmental, and behavioral factors. the 1990s, the number of people with a mental health problem has increased in the UK (Mental Health Act 1983, 1990).

There is a growing awareness of the need to improve the lives of people with mental health problems. The Department of Health (1999) has set out a vision of a new mental health system, which will be based on the following principles:

- (1) People with mental health problems should be treated as individuals, with their own needs and wishes.
- (2) People with mental health problems should be given the opportunity to participate in decisions about their care and treatment.
- (3) People with mental health problems should be given the opportunity to live in their own homes and communities.

These principles are reflected in the new Mental Health Act (Mental Health Act 2003) and the new Mental Health Review Tribunal (Mental Health Act 2003).

The new Mental Health Act (Mental Health Act 2003) is a landmark piece of legislation, which will have a profound impact on the lives of people with mental health problems. It will give people with mental health problems the right to participate in decisions about their care and treatment, and will give them the right to live in their own homes and communities.

The new Mental Health Act (Mental Health Act 2003) will also give people with mental health problems the right to be treated in their own homes and communities, rather than in hospital. This will be a major step towards the goal of providing a mental health system that is based on the principles of recovery and self-help.

The new Mental Health Act (Mental Health Act 2003) will also give people with mental health problems the right to be treated in their own homes and communities, rather than in hospital. This will be a major step towards the goal of providing a mental health system that is based on the principles of recovery and self-help.

The new Mental Health Act (Mental Health Act 2003) will also give people with mental health problems the right to be treated in their own homes and communities, rather than in hospital. the 1990s, the number of people in the UK who are employed in the public sector has increased from 10.5 million to 12.5 million (12.5% of the population).

There are a number of reasons for this increase. One is that the public sector has become a more important part of the economy. Another is that the public sector has become more efficient. A third is that the public sector has become more attractive to workers. A fourth is that the public sector has become more competitive.

The public sector has become a more important part of the economy. This is because the public sector has become more efficient.

The public sector has become more efficient. This is because the public sector has become more attractive to workers.

The public sector has become more competitive. This is because the public sector has become more important to the economy.

the 1990s, the number of people with a disability has increased in all countries, and the number of people with a severe disability has increased in all countries except the United States (Table 1).

There are a number of reasons for this increase. One of the most important is the increase in the life expectancy of people with a disability. In the United States, the life expectancy of people with a disability has increased from 45 years in 1980 to 55 years in 2000. In the United Kingdom, the life expectancy of people with a disability has increased from 40 years in 1980 to 50 years in 2000. In the United States, the number of people with a disability has increased from 35 million in 1980 to 55 million in 2000. In the United Kingdom, the number of people with a disability has increased from 5 million in 1980 to 10 million in 2000.

Another reason for the increase is the increase in the number of people with a disability who are aged 65 and over. In the United States, the number of people with a disability aged 65 and over has increased from 10 million in 1980 to 20 million in 2000. In the United Kingdom, the number of people with a disability aged 65 and over has increased from 2 million in 1980 to 5 million in 2000. In the United States, the number of people with a disability aged 65 and over has increased from 10 million in 1980 to 20 million in 2000. In the United Kingdom, the number of people with a disability aged 65 and over has increased from 2 million in 1980 to 5 million in 2000.

A third reason for the increase is the increase in the number of people with a disability who are aged 18 and under. In the United States, the number of people with a disability aged 18 and under has increased from 5 million in 1980 to 10 million in 2000. In the United Kingdom, the number of people with a disability aged 18 and under has increased from 1 million in 1980 to 2 million in 2000. In the United States, the number of people with a disability aged 18 and under has increased from 5 million in 1980 to 10 million in 2000. In the United Kingdom, the number of people with a disability aged 18 and under has increased from 1 million in 1980 to 2 million in 2000.

A fourth reason for the increase is the increase in the number of people with a disability who are aged 18 and over. In the United States, the number of people with a disability aged 18 and over has increased from 30 million in 1980 to 45 million in 2000. In the United Kingdom, the number of people with a disability aged 18 and over has increased from 4 million in 1980 to 8 million in 2000. In the United States, the number of people with a disability aged 18 and over has increased from 30 million in 1980 to 45 million in 2000. In the United Kingdom, the number of people with a disability aged 18 and over has increased from 4 million in 1980 to 8 million in 2000.

A fifth reason for the increase is the increase in the number of people with a disability who are aged 18 and over. In the United States, the number of people with a disability aged 18 and over has increased from 30 million in 1980 to 45 million in 2000. In the United Kingdom, the number of people with a disability aged 18 and over has increased from 4 million in 1980 to 8 million in 2000. In the United States, the number of people with a disability aged 18 and over has increased from 30 million in 1980 to 45 million in 2000. In the United Kingdom, the number of people with a disability aged 18 and over has increased from 4 million in 1980 to 8 million in 2000.

A sixth reason for the increase is the increase in the number of people with a disability who are aged 18 and over. In the United States, the number of people with a disability aged 18 and over has increased from 30 million in 1980 to 45 million in 2000. In the United Kingdom, the number of people with a disability aged 18 and over has increased from 4 million in 1980 to 8 million in 2000. In the United States, the number of people with a disability aged 18 and over has increased from 30 million in 1980 to 45 million in 2000. In the United Kingdom, the number of people with a disability aged 18 and over has increased from 4 million in 1980 to 8 million in 2000.
